

Unhandled Constraints

1. All people must be either pilots or passengers
2. Flights that are supported by Airbus airplanes must have at least one assigned pilot
3. Flights that are supported by Boeing airplanes must have at least two assigned pilots
4. Ensure that a Pilot and a Passenger cannot have the same PersonID.
5. If the passenger has the funds to cover the price of flight, and the airplane supporting that flight has the seating capacity, then your system must track the passenger boarding the flight and later getting off the flight at their desired destination.
6. As each airplane prepares to takeoff and depart towards the next airport along its route, passengers at that airport who need to board, will board the aircraft, and then the airplane will take off towards the next airport along its flight route until it reaches its (final) destination airport.
